

# HabitKit

HabitKit is a visual habit tracker for iPhone and Android. Colourful grids make everyday consistency easy to see, with flexible tracking, reminders, notes and home screen widgets. Made independently by Sebastian Röhl in Germany. No account required.

|                      |                                                                                                                                               |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Platforms</b>     | iPhone and Android                                                                                                                            |
| <b>Availability</b>  | Free to download. Up to four active habits free. Pro is available monthly, yearly or as a lifetime purchase. Prices vary by store and region. |
| <b>Developer</b>     | Sebastian Röhl, independent developer in Germany                                                                                              |
| <b>First release</b> | November 2022                                                                                                                                 |
| <b>Account</b>       | No account or sign-up required.                                                                                                               |
| <b>Storage</b>       | Everyday habit tracking works offline. Habit history is stored on the device.                                                                 |
| <b>Languages</b>     | 17 languages, 18 locale options (Brazilian and European Portuguese).                                                                          |
| <b>Store ratings</b> | 4.8/5 on the App Store (US); 4.6/5 on Google Play. Checked 2 October 2026. Ratings vary by region and over time.                              |
| <b>Press contact</b> | sebaroehl@gmail.com                                                                                                                           |

## What HabitKit includes

Contribution-style grids; Yes / No, Count and Measure tracking; custom units and decimals; build and quit habits; flexible schedules and streaks; statistics, calendars and notes; reminders and home screen widgets; colours, icons, emoji and categories. Some features require Pro.

## The origin

Sebastian built HabitKit after seeing friends struggle to keep new habits and noticing the appeal of GitHub contribution graphs. The first version was built independently, and reached the App Store in November 2022.
